Summary

Computer Engineering student and full-stack developer with practical experience building AI-integrated applications using Python, Node.js, and the MERN stack. Skilled at integrating Generative AI APIs (Gemini, Groq) to deliver intelligent, production-ready features – from automated note generation to AI-assisted content creation. Strong analytical problem-solving ability, solid backend engineering foundation (REST APIs, MongoDB, JWT), and a fast-learner mindset focused on applying AI to real-world challenges.

Technical Skills

Languages: Python, JavaScript (ES6+), TypeScript, Java, C/C++, SQL, HTML5, CSS3

AI & APIs: AI API Integration, Google Gemini API, Groq API, Generative AI Application Development

Frontend: React.js, Redux, Context API, Tailwind CSS, Bootstrap, Vite, Responsive Design

Backend: Node.js, Express.js, RESTful APIs, WebSockets, JWT Authentication, RBAC

Databases: MongoDB, PostgreSQL, MySQL, Oracle, Redis, Mongoose, Prisma ORM

DevOps & Tools: Git, GitHub, Docker, AWS, CI/CD (Vercel, Render, Railway, Netlify), Postman, Swagger, XAMPP

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design Basics

Experience

TechSonix, Pune **Jan 2025 – Feb 2025**
Backend Developer Intern *Remote*

- Developed and maintained RESTful API endpoints using Node.js and Express.js, following modular routing and middleware architecture under senior developer guidance.
- Implemented JWT-based authentication with bcrypt password hashing and role-based access control (RBAC) to secure backend routes and manage user permissions.
- Debugged backend issues, managed codebase using Git, and collaborated on feature development and code reviews.

TechKing Solutions, Shirdi **Jun 2023 – Jul 2023**
Web Developer Intern *Shirdi, Maharashtra*

- Developed a Hotel Management System (HTML, CSS, JavaScript, PHP, MySQL) with responsive booking interfaces and real-time backend data integration.

Projects

BlogStack – AI-Powered Blogging Platform | **Live Demo** *React.js, Node.js, Express.js, MongoDB, Gemini API, ImageKit*

- Integrated Google Gemini API for AI-assisted blog content generation, enabling users to auto-generate topic-based drafts; built full CRUD platform with nested comments, likes, bookmarking, and CDN-optimized image storage via ImageKit.io.
- Deployed across Vercel and Render, resolving cross-domain CORS and environment-configuration issues between decoupled frontend and backend hosts.

Investify – Financial Planning Platform | **Live Demo** *React.js, Node.js, Express.js, MongoDB, JWT, RBAC*

- Architected a full-stack investment platform (solo) with a custom rule-based recommendation engine that personalizes asset allocation across stocks, mutual funds, SIPs, and gold based on user risk profile and financial goals.
- Engineered modular REST APIs with JWT authentication, bcrypt hashing, three-tier RBAC (admin/user/advisor), and indexed MongoDB queries for secure and performant data retrieval.

AI Notes Generator – Intelligent Study Assistant *Python, React.js, Node.js, Groq API (Llama 3.3 70B), xhtml2pdf, python-docx*

- Built an AI-powered study assistant in Python that transforms raw topic text into four structured formats – notes, MCQs, cheat sheets, and flashcards – via difficulty-aware prompt engineering against the Groq LLM API (Llama 3.3 70B).
- Designed four purpose-built prompt templates enforcing strict output contracts (fixed headings, question format, one-page constraints) to produce reliably parseable LLM responses downstream.
- Engineered dual export pipelines converting LLM-generated markdown into styled PDF (xhtml2pdf) and DOCX (python-docx) documents with custom formatting and section layout.

Education

International Institute of Information Technology (I2IT), Pune **Expected 2027**
Bachelor of Engineering in Computer Engineering – CGPA: 7 *Pune, Maharashtra*

Sanjivani K.B.P. Polytechnic, Kopargaon **2024**
Diploma in Computer Engineering – 90.29% *Kopargaon, Maharashtra*

Achievements & Certifications

- Secured 2nd place among 50+ teams at TechMantra Hackathon, prototyping a MERN-based application under time constraints.
- Led a 4-member team for final-year diploma project, coordinating task allocation and timelines to deliver on schedule.
- **Certifications:** REST API Testing (Postman) | JavaScript from Scratch | AR/VR Bootcamp Acceleration | InnoHack 2.0, VIT
